Bob Baird : Shipwrecks of the Forth and Tay before purchasing it in order to gauge whether or not it would be worth my time, and all praised Shipwrecks of the Forth and Tay:

A meticulously-researched reference guide to 300 shipping losses

'Each of the listed wrecks is accompanied by details of the sinking, the position (where known), history and fate of the crew, along with supporting maps and charts. ...a valuable book contributing to the maritime history of the area. Highly recommended'. Sea Breezes ----- '...is a triumph of research and dedication as it reveals the facts

about the loss of some 300 ships and other craft within a given geographical area of the UK and, as such, will prove to be an invaluable asset to all scuba divers and others who seek to learn more about these vessels and their history. ... For those with a passion for the shipwrecks within the geographical area covered by this work, I doubt a better book will ever be published and I congratulate the author on his attention to detail and painstaking research'. Sport Diver Magazine ----- 'The author has compiled an amazing collection of photographs, some are sinking , some aground, of the ships listed. Typically meticulously, the author has incorporated a detailed index of the exact position of all the wrecks mentioned'. Ships and Shipping ----- 'This is a fantastic book for anyone interested in maritime affairs and particularly shipwrecks. It is written in an engaging personal style and with such a wide range of stories and facts that it will appeal even to those who have no intention of searching for wrecks to dive on in the east of Scotland'. The Northern Mariner/Le marin du nord ----- '...will appeal to submarine buffs and all wreck divers... ...contains masses of new information. It deals with more than 300 wrecks sunk off the coast off Scotland... Full of detail about the sinking, positions and what divers will see today, it is particularly strong on submarines'. DIVER Magazine
